

SIRIUS TANKS

When it comes to the environment we are Sirius!

- Reduces ground contamination
- Reduces vacuum truck costs
- Reduces environmental disposal costs
- Prevents wildlife and livestock from drinking containment fluid

- True secondary containment. Unlike dual walled tanks, the stealth contains the entire valving and pump inside the containment area, eliminating a potential environmental clean up.
- With Stealth or Nova any accidental overflows during filling are captured in the secondary containment again preventing expensive clean ups.
- The HardTopper prevents over 90% of snow or rain from entering the containment. This minimizes vacuum truck requirements and drastically reduces environmental disposal costs.
- Barrel stands, Stealth and Nova tanks are set up for easy mounting of chemical pumps, controllers and solar equipment.
- Bottom fill adaptors and many other options are available.

SIRIUS STEALTH

STEALTH TANK
W/ HARDTOPPER

500G NOVA TANK
*Shown with injection system

200G and 300G configuration shown

*HardTopper and sight glass optional on Stealth and Nova Tanks

*Barrels are optional

KEY BENEFITS

- Enclosed containment keeps out debris and animals
- Lightweight and easy to handle
- Thick and flexible design provides high structural integrity during seasonal temperature swings
- Tanks scaled in 10 gallon increments
- No assembly required
- Optional chemical injection pump can be directly mounted on Tank System
- Optional HardTopper minimizes rain or snow melt from entering containment
- Keeping snow and rain out of containment significantly reduces vacuum truck charges and risk of ground contamination

SPECIFICATIONS

- High-density polyethylene (HDPE) construction
- 120% overflow capacity

Model	Single Barrel	Double Barrel	Stealth 200	Stealth 300	Nova 500
Capacity (US Gallons)	1x 55G Barrel	2x 55G Barrels	225	335	500
Overall Height	43.5"	49"	68"	72"	93"
Height of Base	17.5"	16"	16"	24"	34"
Base Footprint	40" x 64"	54" x 89"	54" x 89"	54" x 89"	106" x 60"
